

Stylish home theatre hideaway from under-used attic bedroom

Before work began

Work in progress

The fabulous result

The property is a three-storey Victorian end-of-terrace building. The top floor of the house was being used as an attic bedroom arranged with a stud-work dividing wall separating the bedroom from the staircase.

The client requested that the room be converted to a home cinema fitted with Digital Surround Sound and a 50" Plasma Television. They wanted to retain the existing storage areas in the attic but have them remade in keeping with the new room. Finally they requested that the conversion be done allowing for the possibility of returning the room to a bedroom in future, if required.

How we transformed the space

A.P.P considered the possibility of retaining the stud-work wall to aid in sound-proofing and to make it easier to darken the room when required. The client was happy to have the wall removed however which gave a lot more space for furniture and made the room feel much less cramped. Once the wall was removed the entire room was stripped back to the rafters and studwork.

The WOW factor

The clients were delighted. As can be seen from the photographs they were left with a beautiful TV room / Home Cinema. One feature that was particularly appreciated was the fact that all cables associated with the TV and sound system are hidden – the TV 'floats' and there are no cables on view to any of the speakers.

A typical 50" TV can weigh upwards of 30kg so a wooden frame capable of holding the TV was built and attached using masonry plugs to the brickwork at the rear of the room. Whilst the studwork was exposed the first-fix wiring was installed which included power, HDMI leads and cabling for the Surround Sound System. 6mm plasterboard was then fixed to the walls and ceiling and the room was plastered. The room was decorated and carpeted to the clients' specification and then the TV and Sound System were installed.
